

An ECOSOFTT Success Case: Household Water Consumption, Singapore

ECOSOFTT Conducts Major Study on Water Consumption Patterns in Singapore

ECOSOFTT, together with our partner Proba was engaged by PUB, Singapore's National Water Agency to conduct a survey of water consumption in 400 sample households in Singapore.

The results provided important information to enable PUB to assess the effectiveness of its water conservation programme and devise ways to further reduce water footprint in our living communities.
